SUMMARY

Software engineer with **13 years** building and delivering software, now building **LLM-backed products end to end**. **Founding engineer** at ZenLedger, a **fintech** platform: grew it from startup stage through **Series B**, led a team of up to 15, owned the financial data platform behind **10B+ transaction rows** and **$50B+ in tracked assets**, and ran engineering on its **crypto-forensics product used by the IRS**.

EXPERIENCE

Marpha Labs — Co-Founder & Engineering Lead

Remote · 2025 – Present

An independent, self-funded product studio: a distributed collective of builders across Nepal, the USA, Canada, and Australia.

SwiftScout — LIVE ON APP STORE

Native iOS · Swift

- Shipped a native iOS app alerting drivers to **50+ enforcement cameras across San Francisco and Oakland**, processed entirely on-device, and live on the App Store as a **paid subscription**.

FillAnyForms — PRE-LAUNCH

LLM infra · Rails · AWS

- Built an **AI-assisted document processing system** that extracts fillable fields from PDFs and scans, and maps structured user data into them.
- Built the LLM layer end to end: a **LiteLLM proxy** over OpenRouter giving multi-provider routing, **per-user cost tracking** with spend caps, and a privacy mode keeping inference on the user's own machine.

HabreCare — IN DEVELOPMENT

React Native · Expo · Supabase

- Built a mental-wellbeing **mobile app**, developed **spec-first with AI coding agents**: design specs per feature and automated typecheck, lint, and test gates every agent-authored change must pass.
- Architected **local-first sync** with Supabase for cloud.

ZenLedger.io — Founding Engineer & Lead Software Engineer

Remote · 2018 – 2025

__Fintech__ platform for crypto tax, accounting, and regulatory reporting, with a forensics line for government. Joined at startup stage and scaled the product and team through a __$15M Series B__.

BATS — FEDERAL CONTRACT

Engineering Lead · crypto forensics

- **Engineering lead** for ZenLedger's government crypto-forensics product, used by **IRS Criminal and Civil Investigation** units under a multi-year federal contract, with agency-scoped authorization and **PII segregation** across case records.
- Built the **training-data pipeline for address attribution** (**827K labelled addresses across 29 classes**, derived from replica Bitcoin and Ethereum node indexes), and ran the trained classifier across every block.

ZenLedger Platform

Rails · Go · AWS

- Led an engineering team of **up to 15**, setting engineering standards, owning delivery timelines, and driving architecture and specification reviews across teams.
- Owned the **financial data ingestion** and parsing platform integrating **100+ exchanges and blockchains**, processing **10B+ transaction rows** and tracking **$50B+ in customer assets** across **100K+ customers**.
- **Drove the monitoring and incident path**: Datadog alert rules escalating to the on-call engineer, Honeybadger error reporting, and runbooks so triage didn't depend on tribal knowledge.
- Rewrote the tax calculation service from Rails/Sidekiq to Go: **70% less compute** for the same workload, running **60% faster**.

- Built and operated the payment system, and designed **autoscaling AWS infrastructure** that matched capacity to highly seasonal demand.

EB Pearls — Software Engineer → Associate Project Manager

Kathmandu · 2013 – 2018

- Delivered **6+ enterprise projects** for an Australia-based client in PHP (CodeIgniter, Laravel) and MySQL, from requirements through release.
- Promoted into delivery ownership as Associate Project Manager, running delivery across a **10-person** engineering, QA, and design group, owning scope changes, budgets, and release timelines.

TECHNICAL SKILLS

Fintech — Payments · financial data ingestion & reconciliation · high-volume transaction processing · tax and regulatory reporting · blockchain forensics for government & law enforcement

AI & ML — Supervised classification · feature engineering · training-data pipelines · model inference at scale · LLM application design · LiteLLM · OpenRouter · multi-provider routing · usage & per-user cost tracking · spec-driven development with AI coding agents

Production & Observability — Datadog · Honeybadger · PagerDuty · ScoutAPM · Grafana · alerting & incident escalation · runbooks · autoscaling AWS infrastructure

Languages & Platforms — Go · Ruby on Rails · TypeScript · React · React Native (Expo) · Next.js · Swift / native iOS · PostgreSQL · MongoDB · Redis · AWS · Docker · Sidekiq · OpenTofu/Terraform · Cloudflare · GitHub Actions

Leadership — Team leadership (up to 15 engineers) · architecture & delivery ownership · Agile/Scrum · Certified ScrumMaster

EDUCATION

B.E. Computer Engineering — Kathmandu University, Dhulikhel, Nepal 2009 – 2013

Certified ScrumMaster (CSM) — Scrum Alliance
